Glassette™

**WALL ART SCALED
FOR HEALTHCARE**

Glassette™ is a line of Skyline Design's most popular images and patterns curated specifically for the needs and aesthetics of healing environments.

Drawn from Skyline Design's award-winning Digital Glass Portfolio, Glassette™ features the work of Alexander Girard, Henry Domke, Scholten and Baijings, Bonnie Edelman, Kelly Harris Smith, Steven Meyers and many other designers, photographers, and artists.

Healthcare environments are filled with unique and specific challenges. Art and décor created for these environments must be soothing and restorative for both patients and providers, and must be easy to clean and resistant to infection.

Glassette™ meets these challenges. The creative and elegant designs for which Skyline Design is known have proven benefits in healthcare environments, and glass as a material is non-porous, durable, easy to clean and disinfect in place, and cost effective for both large and small facilities.

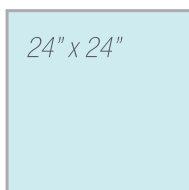

Skyline Design offers Glassette™ in frameless panels that come in five standard sizes, which can be installed singly or in multiples.
